Bring customers closer to your business.

Take your business online with payment solutions powered by the Moneris® Gateway.

Moneris

An all-in-one platform for all your online payment needs.

Moneris Gateway

The Moneris Gateway is a comprehensive payment processing platform powering our Online Payment Processing, supported by the Merchant Resource Center and our Developer Portal. Grow your business online with everything from convenient and secure ways to accept online payments to features and tools that help you run your business more efficiently.

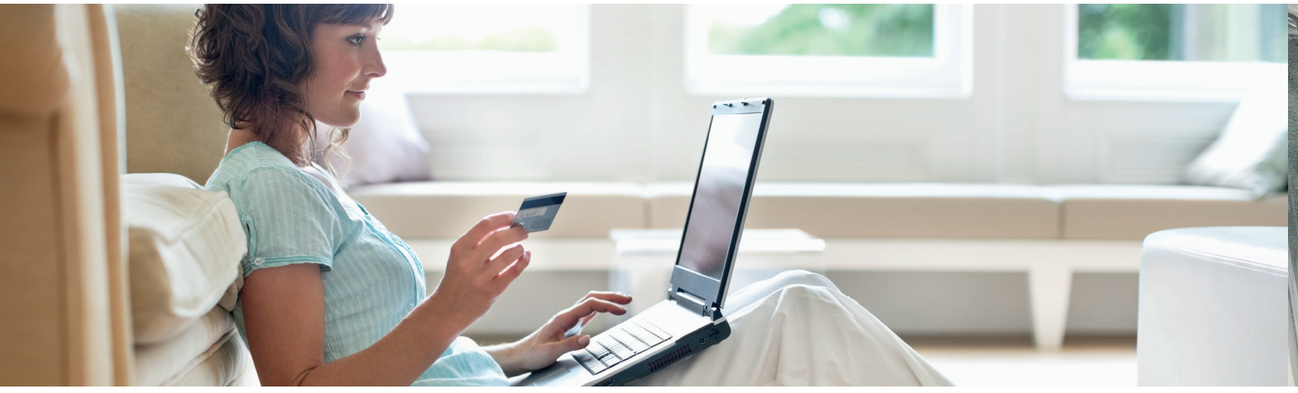

Merchant Resource Center

Our versatile and Payment Card Industry (PCI) certified Merchant Resource Center gives you enhanced control and peace of mind. Our merchants have access to administrative and reporting tools to manage everything from accounting to analytics.

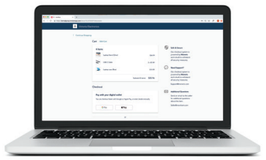

Developer Portal

Designed with developers in mind, our user-friendly portal makes it easy for anyone to work with Moneris. Developers will have access to resources, specifications, documentation, and sample code. Our blog and forum resources also allow developers to connect, share, and provide feedback more easily within the developer community.

Be payment ready for your online customers.

Moneris Checkout

You can easily and securely accept and process customer transactions through your own business website using Moneris Checkout, a comprehensive online payment solution that is hosted by Moneris.

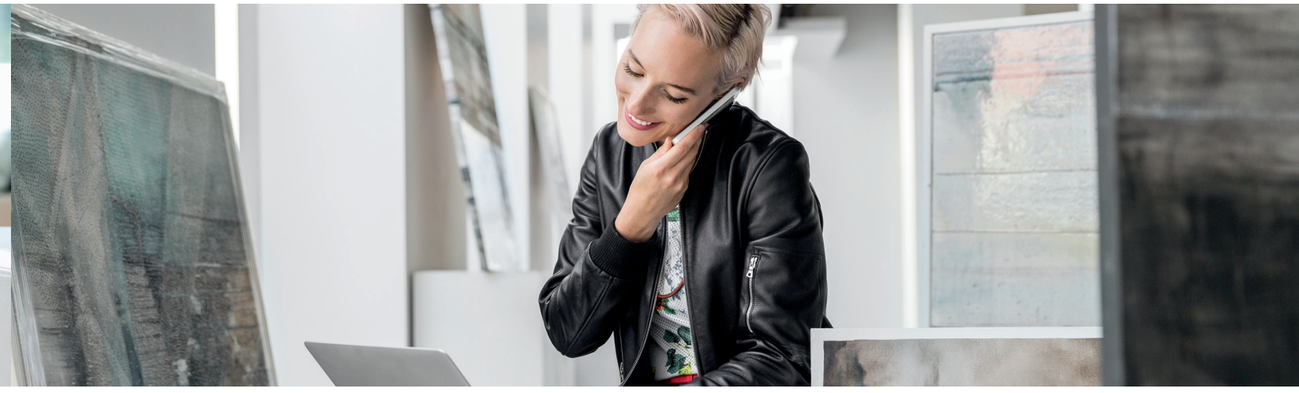

- Checkout forms are developed, hosted, and secured by Moneris
- Customize your checkout form fields
- Supports Google Pay™, fraud prevention tools and gift cards
- Fits seamlessly into your business' website with your own logo
- Activated within the Merchant Resource Center

Application Program Interface (API)

Our robust APIs provide merchants and developers with ecommerce payments for a seamless checkout experience wherever your customers shop. With this solution, APIs are utilized to integrate payment processing into an existing website, so you can build a solution tailored for your business.

- Highly flexible and customizable integration options
- Supports a wide variety of development languages (.NET, Java, PHP, etc.)
- Processes transactions directly from the merchant's website in real time
- Fraud prevention tools* are compatible with the Moneris Gateway API

Turn your computer into a terminal too.

Virtual Terminal (VT)

Your business shouldn't have limits. With our Virtual Terminal (VT) you'll have the ability to accept credit and debit card orders over the phone, through the mail, and on your desktop or laptop for easy accessibility. Processing the payment is as simple as logging into your account and inputting the card details.

- Real-time transaction processing for a better all-around checkout experience
- Multiple users can simultaneously process transactions on different computers
- Fraud protection features* can be easily added as there is no development required
- The VT allows payment processing in both Card-Not-Present (CNP) and Card-Present (CP) environments:
    - CNP: Accept credit cards over the phone, through the mail, or online and obtain authorizations quickly and securely in real time over the Internet.
    - CP: Choose from a selection of PIN pads to process face-to-face credit and debit card transactions in-store or on the go.

Powerful features* that make for easier payments.

Tokenization & Vault

Tokenization is the process of replacing sensitive credit card information with a unique identifier called a token. This online payment feature helps to increase payment security and reduce the risk of transmitting vulnerable credit card data.

The Vault is a secure storage space used by Moneris merchants to store customer tokens. Tokens can be shared across your business and used for subsequent transactions online and at the point-of-sale.† As no card data is stored by the merchant, security is that much stronger.

Hosted Tokenization

Hosted Tokenization allows you to accept payments within your custom solution without handling sensitive card data directly. Customers looking to purchase from your website input their sensitive data into key fields that are hosted on the Moneris Gateway. All of the sensitive data is directly swapped for a token that you can use as needed to complete the customer's purchase. With this option you will also have the ability to customize the checkout experience to your brand.

Advanced Fraud Tools

Real-Time Cardholder Authentication
3-D Secure provides real-time authentication of an online shopper to their card issuer through Visa® Secure and Mastercard Identity Check®.

Real-Time Risk Assessment
Moneris Kount® helps you to protect your business in real time against online transaction fraud by providing real-time risk assessments for select transactions. Minimize loss, reduce chargebacks, and increase order acceptance with Moneris Kount.

Multi-Currency Pricing

Multi-Currency Pricing (MCP) is an online feature allowing you to price your products and services in one of over 120 international currencies and receive settlement in Canadian dollars. You'll get access to real-time foreign exchange rates that can be held for an extended period of time.

Digital Wallets

With services such as Apple Pay® and Google Pay, enable fast and easy payments from a variety of devices. Provide customers with a streamlined and secure checkout experience, online or in-app, with just a simple click or tap.

Recurring Payments

Take control of the customer billing process with our recurring payments feature. This solution is easy to set up and manage, and will allow you to automatically process payments from customers at selected intervals.

Account Updaters

Credit card declines happen. But that shouldn't affect your business cash flow. With Mastercard's Automatic Billing Updater (ABU) and the Visa Account Updater (VAU), cardholder account information is kept up to date when a card is reported lost, stolen, damaged or expired.

Level 2/3 Data

Partner with your corporate customers to help them track how their money is spent. With our Level 2/3 data feature, your customers' corporate purchasing card's monthly statement can now include more descriptive details such as item SKU numbers and quantities, useful for reconciliation and expense reporting.

Gift Cards

Easily enable Gift Card transaction processing via API, Moneris Checkout and/or Virtual Terminal. Prepare your business to cater to the gift giving demands of your customers.
